

Match Case

Match case is used instead of switch case in languages like c++, java we use switch case it is like if else.

Input:

```
day = int(input('Enter Day number'))

if day==1:
    print('Sunday')
elif day== 2:
    print('Monday')
elif day == 3:
    print('Tuesday')
elif day == 4:
    print('Wednesday')
elif day == 5:
    print('Thursday')
elif day == 6:
    print('Friday')
elif day == 7:
    print('Saturday')
else:
    print('Holiday')
```

Output:

```
Enter Day number1
Sunday
```

Input:

```
day = int(input('Enter Day number'))

if day==1:
    print('Sunday')
elif day== 2:
    print('Monday')
elif day == 3:
    print('Tuesday')
elif day == 4:
    print('Wednesday')
elif day == 5:
    print('Thursday')
elif day == 6:
    print('Friday')
elif day == 7:
    print('Saturday')
else:
    print('Holiday')
```

Output:

```
Enter Day number-1  
Holiday
```

It is similar to if else but syntax written is similar to switch case . But works same as if and elif>
